

Consultation in Genetic Testing By Genetic Laboratory, Asiri Surgical Hospital Colombo, Sri Lanka

Revolutionizing Genetic Testing in Asia

- Confirm the Diagnosis
- Thalassemia
- Hemophilia
- Leukemia
- Breast Cancer
- Down Syndrome
- Some forms of Diabetes

Find Out Whether Someone is a carrier of a Genetic Condition

- Genetic testing is especially useful in marriages involving blood relatives to find out whether both partners have the same genetic condition running in the family (ex: Thalassemia)
- Find out whether a baby is affected with a Genetic Condition Before Birth
- Explain why a couple is having Recurrent Miscarriages
- Explain Sub Fertility
- Guide Treatment
- Detect Microorganisms

Genetic testing is useful to detect micro-organisms from samples fast and reliably as there is no need to spend time on tests which take a long time such as cultures.
